Weston Solutions, Inc. (WESTON®) delivers integrated, sustainable solutions for environmental restoration, property redevelopment, design/build construction, green buildings and clean energy. Our engineers, scientists, and energy professionals integrate environmental performance considerations into client operations identifying ways to effectively enhance resource efficiency, use renewable resources, assess product or system life-cycles, identify alternatives for waste disposal incorporating waste reduction, and implement pollution prevention.

WESTON® has a team of over 50 LEED® accredited professionals with extensive experience in incorporating Sustainable Design/LEED® into construction projects on Federal installations throughout the country. Starting from the planning phase throughout the design and construction, WESTON evaluates a wide range of technologies, techniques, materials, and strategies to incorporate sustainable actions and ensure compliance with regulations while developing environmentally efficient facilities.

GREENGRID® ROOFING SYSTEM

Federal Supply Schedule 056

Building and Building Materials/Industrial Services and Supplies

SIN 563-4 – GreenGrid® Roofing System

- This flexible roof system is suited for both new and existing facilities to improve energy efficiency and storm water discharge performance while promoting a healthier environment. These visually appealing roofs are dramatically cooler in the summer and warmer in the winter and are a modular design that arrives at the job site planted and ready for installation. The modules, made of 100% recycled HMWPE plastics, are placed directly on the existing roofing membrane or any other surface with sufficient load bearing capacity. The GreenGrid® can also be installed at grade in locations where owners desire a simple, flexible greening system. Because it is modular, a GreenGrid® rooftop design can be easily adjusted and rearranged after installation to meet a change in stylistic preferences, planting schemes, or maintenance issue.
- 
- The modules come in three different depths. The 2.5-in. depth modules will support sedums and weigh approximately 11 to 13 lbs. per sq. ft. (wet). The standard 4-in. depth modules will support grasses, sedums and wildflowers, and weigh approximately 18 to 24 lbs. per sq. ft. (wet). The 8-in. depth modules will support a large variety of ornamental perennials and shrubs, and weigh approximately 35 lbs. per sq. ft. and up (wet). The modules are available in square, rectangular and triangle shapes. Plants are placed in the modules at the nursery and cared for until they are shipped to the job site for installation. Both fast turnaround pre-planted versions and longer grow out times for increased plant coverage at time of delivery options are available. Preset “palettes” of plants, developed by staff horticulturists, are available to allow customers to select plant varieties according to plant hardiness zone, size and color.
