Digital Data Destruction (D3)

Services Inc. is the first company

in the world to focus on 100% data destruction and recycling of all forms of electronic media. Since our inception in 2004, we process electronic media originating from the 48 continental US States and including Alaska and Hawaii. Due to the inherent risks and lack of recycling with electronic media destruction

using the paper shredding model, this new and appropriate Data Destruction model is now available.

Digital Data Destruction is the 100% removal of media information, and green recycling

of the media after the destruction process. D3 Services uses specialized equipment that we have invented which has been evaluated by the National Security Agency and is approved for the destruction of electronic media labeled Top Secret. The range of media we destroy and recycle includes CD, DVD, Hard Disk Drives (HDD), Tapes (magnetic), and Flash Drives.

We use a ISO 9002 compliant auditing process which is the foundation to a chain of custody with unbroken integrity. The endpoint for your liability begins with our Certificate of Destruction signed by a Notary Public. In addition, customers are covered with liability insurance in the case of data breach.
