Labor Category Descriptions

Software Systems Analyst Senior

Interacts with system users to translate their requirements into systems, hardware, and software requirements and design. Participates in the development of test strategies. Solves engineering problems (or managing the solution of engineering problems) in the functional area to which assigned.

Chief Enterprise Architect

Leads and directs large teams with diverse functional and technical disciplines to include

enterprise architects, systems engineers, business analysts, and network engineers. Works directly with senior executives of the enterprise to consult, coach, and advise on strategy, business alignment, enterprise architecture, information technology solutions, and the associated impact on the organization and its stakeholders. Coordinates resolution of highly complex problems and tasks, selling new ideas and concepts in support of operational goals and objectives. Provides technical and analytical guidance to enterprise architecture team. Integrates and translates complex concepts into tactical action plans. Directs high-level enterprise architecture analysis, evaluation, design, integration, documentation, and development.

SR Governance Architect

Expertise and expertise in SOA, business process reengineering, and DoD acquisition processes/procedures. Ability to develop lifecycle management models for the acquisition, governance, and implementation of a SOA. Functional Responsibility: Develop lifecycle management models for the acquisition, governance, and implementation of a SOA.

Data Analyst

Works in a SOA Center of Excellence data warehouse environment that includes data design, database architecture, metadata and repository creation. Reviews data loaded into the data warehouse for accuracy. Responsible for the development, maintenance and support of an enterprise service bus (ESB) data warehouse system and corresponding data marts. Troubleshoots and tunes existing ESB data warehouse applications. Conducts research into new data warehouse applications and determines viability for adoption.

Best of Breed Senior

Conducts gap analysis during the FEA initial transformation and sequencing phase. Strong understanding of Capital Planning and Investment Control (CPIC); specifically the Select, Control and Evaluate phase. Strong understanding of SOA and its life cycle model and the use of the Enterprise Service Bus (ESB) and orchestration.

Application System Analyst

Participates in the design, creation, and maintenance of computerized databases and systems. Consults with and advises users on access, works directly with users to resolve data conflicts and inappropriate data usage, and directs the maintenance and use of the enterprise architecture encyclopedia. Consults with System Architect (SA) programming personnel to resolve system performance issues. Responsible for the installation, maintenance, configuration, and integrity of SA. Implements application enhancements that will improve the reliability and performance of the application. Works with network engineers to schedule installations and upgrades and maintains them in accordance with established IT policies and procedures. Responsible for file maintenance, control, and product support and facilitates change control, problem management, and communication among architects, engineers, and analysts. Establishes and enforces processes to ensure a consistent, well-managed, and well-integrated application infrastructure. Develops appropriate application and process documentation. Expertise with the BEA SA repository and its internal structure, Visual Basic, SA macros, Windows NT server, SQL server, and DoDAF modeling methodology.

Application System Architect

Recognized expert in organization process improvement methodology. Expertise in business and IT operations support services dealing with Technology insertion and development of strategic analysis for IT operations. Functional Responsibility: Works with Chief Architect to provide vision and strategic direction with regard to application deployment and integration. Generates functional area strategies for enhanced IT operations in a cross-functional area mode throughout the organization. Guides the identification of process, organizational and information technology inadequacies and/or deficiencies that affect the organization's ability to support/meet its functional continuance goals. Generates functional area strategies for enhanced IT operations in a cross-functional area mode throughout the organization. Participates in continuity strategy sessions, strategic assessments and design reviews to validate enterprise approach and associated work products. Provides guidance and direction to other professionals, acts in a consulting and/or advisory capacity; coordinates resolution of highly complex problems and tasks, possesses ability to meet and operate under deadlines.

Data Architect

Works in a SOA Center of Excellence data warehouse environment that includes data design, database architecture, metadata and repository creation. Translates business needs into long-term architecture solutions. Defines, designs, and builds dimensional databases. Responsible for developing data warehousing blueprints, evaluating hardware and software platforms, and integrating systems. Evaluates reusability of current data for additional analyses. Conducts data cleaning to rid the system of old, unused, or duplicate data. Reviews object and data models and the metadata repository to structure the data for better management and quicker access.

Lead Enterprise Architect

Responsible for all aspects of the development and maintenance of assigned enterprise architecture project and takes project from planning through final delivery. Interfaces with all areas affected by the project including end users, computer services, and client services. Defines project scope and objectives and develops detailed work plans, schedules, project estimates, resource plans, and status reports. Conducts project meetings and is responsible for project tracking and analysis. Leads a group of engineers, architects, and analysts and ensures adherence to quality standards and reviews enterprise architecture deliverables. Provides technical and analytical guidance to enterprise architecture team. Directs and participates in high-level enterprise architecture analysis, evaluation, design, integration, documentation, and development. Applies high-level business and technical principles and methods to very difficult technical problems to arrive at creative engineering solutions. Recommends and takes action to direct the analysis and solutions of problems.

Earned Value Management

Expertise in Earned value management as defined by the government standards. Functional Responsibility: Produces cost and effort models for work products and processes using various tools and techniques to meet business needs. SME – EVM utilizes Earned Value Management (EVM) techniques that meet customer requirements for reporting on multiple tasks. Uses appropriate technology to effectively create estimates; ensures technology used is up to date. Assists individuals who provide

estimates to ensure accuracy and consistency; supports users of the estimates and EVM to ensure understanding and proper use. Creates objective estimates delivered to clients to ensure high quality customer service. Defines business goals as measurable units; ensures goals are measured appropriately utilizing EVM techniques. Supports budget estimating activities; provides deliverables within budget in accordance with company guidelines. Prepares cost estimates and price quotations on new work; coordinates the preparation of cost estimates on project continuations. Collects information for proper quotations from other functions as appropriate; ensures quotations are provided within company standards.
